과제(클래스)

```
class Exercise1 {
        public static void main(String args[]) {
                Student s = new Student();
                s.name = "홍길동";
                s.ban = 1;
                s.no = 1;
                s.kor = 100;
                s.eng = 60;
                s.math = 76;
                System.out.println("이름:"+s.name);
                System.out.println("총점:"+s.getTotal(s.kor, s.eng, s.math)  );
                System.out.println("평균:"+s.getAverage( )  );
        }
}
```
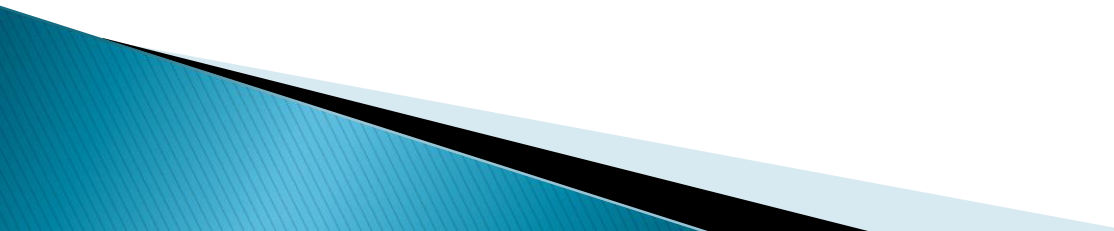

과제(클래스)

```
class Student {
        /*

                (1) 알맞은 코드를 넣어 완성하시오.

        */
}
```

[실행결과]
이름:홍길동
총점:236
평균:78.7
